Samuel Israel ..... ix-x
Preface ..... xi-xxi
List of Loci ..... xxii-xxviii
List of Illustrations, Plans, Tables, and Plates ..... xxix-xliv
PART I: Introduction
Chapter 1: Herodium in History (Daniel R. Schwartz) ..... 1-14
Chapter 2: History of Research (Rachel Chachy) ..... 15-19
PART II: Stratigraphy and Architecture
Chapter 3: The Stratigraphy in the Area of Herod's Tomb Precinct (Roi Porat, Yakov Kalman, and Rachel Chachy) ..... 21-200
PART III: The Mausoleum
Chapter 4: The Reconstruction of the Mausoleum (Rachel Chachy) ..... 201-313
Chapter 5: The Architectural Decoration of the Mausoleum (Orit Peleg-Barkat and Rachel Chachy) ..... 314-348
Chapter 6: The Sarcophagi from the Mausoleum Unearthed at Herodium (Gideon Foerster) ..... 349-361
Chapter 7: Human Bones from the Area of the Mausoleum (Anna Belfer-Cohen, Baruch Arensburg, Alon Barash, and Raheli Sarig) ..... 362-364
PART IV: The Finds
Chapter 8: The Pottery from the Area of the Mausoleum (Judit Gärtner) ..... 365-395
Chapter 9: The Glass Finds from the Area of Herod's Tomb (Ruth E. Jackson-Tal) ..... 396-408
Chapter 10: The Coins from Herodium - the Tomb Area (Nili Ahipaz) ..... 409-425
Chapter 11: The Metal Artifacts from the Area of the Mausoleum (Ravit Nenner-Soriano). ..... 426-431
Chapter 12: Military Equipment from the Area of the Mausoleum and the Theater at Herodium (Guy D. Stiebel) ..... 432-453
Chapter 13: The Latin and Greek Inscribed Pottery from the Area of the Tomb at Herodium (Avner Ecker) ..... 454-459
Chapter 14: The Hebrew and Aramaic Inscriptions from the Area of the Tomb at Herodium (Esther Eshel) ..... 460-473
Chapter 15: Gem and Ring from Herodium (Malka Hershkovitz and Shua Amorai-Stark). ..... $474-475$
Chapter 16: Finds of Animal Remains from the Excavations on the Northern Slope of Herodium (Area A), 2006-2010 (Ram Bouchnick). ..... 476-503
Chapter 17: The Molluscs (Inbar Ktalav) . ..... 504-510
Chapter 18: Graffito of a Ship and a Boat (Boaz Zissu) ..... 511-514
Conclusions
Synthesis and Archaeological-Historical Discussion (Roi Porat, Yakov Kalman, and Rachel Chachy) ..... 515-534

## CHAPTER 12

# MILITARY EQUIPMENT FROM THE AREA OF THE MAUSOLEUM AND THE THEATER AT HERODIUM 

Guy D. Stiebel

The excavations of the area of the mausoleum and theater at Herodium revealed a significant number of iron artefacts, most notably representing a martial material culture. This group of ferrous items comprises iron hobnails and arrowheads. In addition, a large number of slingshots was uncovered alongside a group of rolling stones. Of great interest are a rare bone ear-lath of a composite bow and a copper alloy brooch; both provide important insights into issues of production and identity. This collection of artefacts should be added to the previously published large assemblage of military equipment from both Corbo's and Netzer's excavations at Herodium (Stiebel 2003).

## CATALOGUE

## MILITARY DRESS AND FITTINGS

## Iron Hobnails

Typical dome-head hobnails of Roman caligae were uncovered in the excavations. Such items are commonly reported in the contexts of the First Jewish Revolt and the Bar-Kokhba Revolt (for a detailed discussion and parallels, see Stiebel 2009: 327-328). Although the typically encountered, sporadic examples of individual hobnails are seemingly the result of material fatigue and attrition, numerous hobnails were lost due to the rocky terrain of Judea (Stiebel 2007: 254-255). Nonetheless, the group of six hobnails that were found together suggests that they came from a single sole.

1-6. Group of six hobnails
L.A2582-5132 (Pl. 12.I: 1-6)

Phase 4 b (period between the two revolts)
Six dome-head iron hobnails, probably from the sole of one caliga. All shanks are bent at a right angle.

Dimensions: D. of heads: $10-12 \mathrm{~mm}$.
7. Hobnail
L.A2788-6230/1

Phase 4a (First Jewish Revolt)
Much corroded large dome-head iron hobnail with a broken shank. The hobnail was discovered among the debris of the mausoleum, in front of the cistern to the north.
Dimensions: D. of head: $18-19 \mathrm{~mm}$; total H.: 18 $\mathrm{mm}+$; H. of head: 10 mm .
8. Hobnail
L.A2844-6383 (Pl. 12.I: 7)

Phase 4a (First Jewish Revolt)
Hobnail with a dome head. The head is broken.
Dimensions: D. of head: 13 mm ; total H.: 16 mm ; H. of head: 6 mm .
9. Hobnail
L.A2758-6119/1 (Pl. 12.I: 8)

Phase 4b (period between the two revolts)
Corroded hobnail with a broken shank.
Dimensions: D. of head: 13 mm ; total H.: 12 mm ; H. of head: 5 mm .

## CHAPTER 12: MILITARY EQUIPMENT

PI. 12.I. Hobnails from the mausoleum excavations at Herodium.
10. Hobnail
L.A2758-6119/2 (Pl. 12.I: 9)

Phase 4 b (period between the two revolts)
Corroded hobnail with a straight broken shank.
Dimensions: D. of head: 11 mm ; total H.: 15 mm ; H.
of head: 7 mm .
11. Hobnail
L.A2596-5210 (Pl. 12.I: 10)

Stages 3 to 4 (from the creation of the artificial mount up to the period between the two revolts)

Large hobnail, with a dome head and a shank bent at a right angle.
Dimensions: D. of head: 14 mm ; total H.: 18 mm ; H. of head: 6 mm .
12. Hobnail
L.A2902-6531

Phase 4a (First Jewish Revolt)
Caliga hobnail.
Dimensions: D. of head: 16 mm ; total H.: 16 mm ; H. of head: 8 mm .

## 13. Hobnail

L.A2655-5426/2

Phase 4b (period between the two revolts)
Caliga hobnail with a dome head and a shank bent at a right angle.
Dimensions: D. of head: $11-12 \mathrm{~mm}$; total H.: 15 mm ; H. of head: 4 mm ; Th. of shank: 5 mm .

## 14. Hobnail

L.A2583-5143

Phase 4b (period between the two revolts)
Caliga hobnail with a dome head and a slightly bent shank.

Dimensions: D. of head: 12 mm ; total H.: 21 mm ; H. of head: 8 mm ; Th. of shank: $4-5 \mathrm{~mm}$.
15. Hobnail
L.A2870-12584 (Pl. 12.I: 11)

Postdating Stage 3 (area of the theater)
Large iron dome-head hobnail with a broken shank.
Dimensions: D. of head: $12-15 \mathrm{~mm}$; total H.: 20 $\mathrm{mm}+$; H. of head: 8 mm .
16. Hobnail
L.A2983-10066 (Pl. 12.I: 12)

Stages 2-3 (area of the theater)
Much damaged dome-head iron hobnail with a broken shank.
Dimensions: D. of head: 15 mm ; total H.: $20 \mathrm{~mm}+$; H. of head: 8 mm .

## 17. Brooch

L.A2582-5126 (Ill. 12.1, Color Plate 14: 3)

Phase 4b (period between the two revolts)
A wheel brooch (fibula). The cast copper-alloy brooch features the typical outlines of a wheel brooch. The circular wheel-like front has six central spokes corresponding to the six very small projecting lobed knobs located around its perimeter. The triangular concave spokes connect the outer edge with the round center to which a highly corroded roundheaded iron pin is attached. The elongated fastening pin is preserved on its back. The brooch was found in a refuse dump revealed to the west of the mausoleum ruins and clearly belonged to the Roman occupying force at the end of the First Jewish Revolt (71 CE). A

III. 12.1. Roman wheel brooch revealed in the refuse dump to the west of the mausoleum ruins.
very similar, yet unpublished, specimen was revealed in Yigael Yadin's excavations at Masada and belongs to the same chronological stage.

Wheel brooches are documented as early as the first century CE and the latest examples are attested in third-century CE contexts. The main distribution centers of wheel brooches were in Gaul and the Rhineland, most notably in northern and eastern Gaul (Green 1982: 168). It must be stressed that the Gallic origin of the brooch does not appear to testify to the origin of the soldiers but rather to their fashion taste. Gallic dress items were very popular among Roman soldiers, the most prominent example being the AVCISSA brooch. Another indication of this "Gallic trend" is the woollen tabby with checks uncovered at Masada, which clearly originated from the northwestern provinces (Sheffer and GrangerTaylor 1994: 197-198, Fig. 84, Cl. Pl. VIb). This kilted sagus no doubt belonged to a member of the Roman garrison that was stationed at Masada. The fact that Roman soldiers constituted an important economic factor and were significant consumers of a wide spectrum of goods is well documented (Le Bohec 1994: 207-220, esp. 218-219), and dress
items and fittings were evidently acquired by the soldiers via two parallel channels: privately but also in an institutionalized manner (cf. P. Ryl. II, 189; $B G U$ $1564=S P 395) .{ }^{1}$

Dimensions: D. of head: 38 mm (with knobs).

## Archery Tackle

The assemblage from the mausoleum and theater areas comprises a rare component - a composite bow and a handful of trilobate iron arrowheads.

## 18. Ear-lath of a composite bow

L.A12477-11224 (Ill. 12.2, Color Plate 14:4)

Stage 3 (the creation of the artificial mount, area of the theater)

III. 12.2. Bone ear-lath uncovered west of the theater in a Herodian dump.

A single bone ear-lath was uncovered west of the theater in a Herodian dump, the formation of which was attributed to the activity of the workers who constructed the artificial mount. It formed part of a composite reflex bow (Coulston 1985: 224-234; James 2004: 191-192). The lath was found almost intact, apart from its most dorsal part that is missing. It has a deep semicircular nock. The slightly curved body
exhibits scoring marks on the front part, while saw marks are discernible on its flat inner side. James (2004: 199) suggested that the rough nature of the lath's inner side was intended to provide a surface conducive for the application of glue that held it to the wooden core of the bow.

Three bone ear-laths were uncovered at Masada, all dated to the First Jewish Revolt (Stiebel and Magness 2007: 26, Pl. 27: 1-3). A bone grip from a Bar-Kokhba Revolt context was further identified in the Wadi Murabba^ât Caves (de Vaux 1961: Pl. XII: 2, Fig. 12: 10; for its identification, see Stiebel 2009: 313, Fig. 2), while another pair of ear-laths was found at the Byzantine site of Nessana (Colt 1962: 52, Pl. XXI: 27). Eastern examples from the Late Roman period are attested in Dura-Europos (James 2004: 191, nos. 648-651) and Belmesa (Coulston 1985: 233, nos. 26-27, Figs. 15-18).

A DNA analysis of one of the ear-laths from Masada indicated local production, as it was found to have been manufactured from an ibex's bone (Stiebel 2007, Appendix 1.1). Since the ibex was endemic only to Palestine, Jordan, and southern Syria, regions that were frequented by both the Roman and rebel archers, the lath cannot be attributed with certainty to either side.
Dimensions: L.: 73 mm ; W.: 9 mm ; W. of nock: 3 mm .

## TRILOBATE IRON ARROWHEADS

All the arrowheads belong to the most common type: the trilobate iron arrowhead (for an introductory discussion, see Stiebel 2009: 313-315). They should be added to the already published 137 trilobate iron arrowheads (Stiebel 2003: 216-217, 227-236). As in the latter assemblage, the most common trilobate iron arrowhead is of Type C (Stiebel 2003: 217; idem 2009: 314).
19. Trilobate iron arrowhead
L.A2628-5313/1 (Pl. 12.II: 1)

Phase 4a (First Jewish Revolt)

1. For the production and ownership of Roman military equipment, see Bishop and Coulston 2006: 233-240; 262-267; Stiebel 2007: 242-264.

## CHAPTER 12: MILITARY EQUIPMENT

Very well-preserved head, with slightly bent tang due to impact. The tang still features the corroded remains of the wooden foreshaft. It belongs to Type C (Stiebel 2003: 216-217, 227-236).
Dimensions: Overall L.: 48 mm ; L. of tang: 24 mm ; W. of head: 10-12 mm.
20. Trilobate iron arrowhead
L.A2628-5313/2 (Pl. 12.II: 2)

Phase 4a (First Jewish Revolt)
Similar to cat. no. 19. It has a slightly bent tang due to impact. One wing is partly damaged. The head belongs to Type C.
Dimensions: Overall L.: 48 mm ; L. of tang: 20 mm ; W. of head: $10-11 \mathrm{~mm}$.
21. Trilobate iron arrowhead
L.A2852-6403 (Pl. 12.II: 3)

Phase 4a (First Jewish Revolt)
Much corroded head. One wing is missing and another is damaged. The tang is bent and broken due to impact. The head belongs to Type A.
Dimensions: Overall L.: $48 \mathrm{~mm}+$; L. of tang: 11 $\mathrm{mm}+$; L. of head: 37 mm .
22. Trilobate iron arrowhead
L.A2759-6118 (Pl. 12.II: 4)

Phase 4a (First Jewish Revolt)
Very damaged head. Broken tang and most of the wings is missing.
Dimensions: Overall L.: $29 \mathrm{~mm}+$.
23. Trilobate iron arrowhead
L.A2759-6235/1 (Pl. 12.II: 5)

Phase 4a (First Jewish Revolt)
Small and badly damaged head.
Dimensions: Overall L.: $25 \mathrm{~mm}+$.
24. Trilobate iron arrowhead
L.A2759-6235/2 (Pl. 12.II: 6)

Phase 4a (First Jewish Revolt)
Damaged head with one damaged wing. It seems to belong to Type C.
Dimensions: Overall L.: $29 \mathrm{~mm}+$; L. of head: 24 mm ; W.: 11 mm .
25. Trilobate iron arrowhead
L.A2844-6382 (Pl. 12.II: 7)

Phase 4a (First Jewish Revolt)
Damaged head. One wing and most of the tang are missing. It appears to belong to Type C.
Dimensions: Overall L.: $39 \mathrm{~mm}+$; L. of head: 35 mm .
26. Trilobate iron arrowhead
L.A2810-6296 (Pl. 12.II: 8)

Phase 4a (First Jewish Revolt)
Very damaged head; most of its distal part is missing.
Dimensions: Overall L.: $27 \mathrm{~mm}+$; L. of head: 19 $\mathrm{mm}+$.
27. Trilobate iron arrowhead
L.A2718-6005/1 (Pl. 12.II: 9)

Phase 4a (First Jewish Revolt)
Damaged head with two chipped wings. The tang is bent due to impact. It seems to belong to Type A.
Dimensions: Overall L.: 35 mm ; L. of head: 24 mm .
28. Trilobate iron arrowhead
L.A2780-6212 (Pl. 12.II: 10)

Phase 4a (First Jewish Revolt)
Corroded head. Its tang is broken. The head appears to belong to Type E.
Dimensions: Overall L.: $37 \mathrm{~mm}+$; L. of head: 31 mm ; W.: 12-13 mm.
29. Trilobate iron arrowhead
L.A2788-6230/2 (Pl. 12.II: 11)

Phase 4a (First Jewish Revolt)
Bent wings and broken tang due to impact. The head belongs to Type B .
Dimensions: Overall L.: $31 \mathrm{~mm}+$; L. of head: 25 mm ; W.: 11-12 mm.
30. Trilobate iron arrowhead
L.A2757-6229/1 (Pl. 12.II: 12)

Phase 4a (First Jewish Revolt)
Bent wings and broken tang due to impact. The head belongs to Type C.
Dimensions: Overall L.: $39 \mathrm{~mm}+$; L. of head: 30 mm; W.: 13-14 mm.
31. Trilobate iron arrowhead
L.A2757-6229/2 (Pl. 12.II: 13)

Phase 4a (First Jewish Revolt)
Bent wings and broken tang due to impact. The two wings are damaged. The head belongs to Type C.

Dimensions: Overall L.: $27 \mathrm{~mm}+$; L. of head: 25 mm ; W.: 11-13 mm.
32. Trilobate iron arrowhead
L.A2691-5562 (Pl. 12.II: 14)

Phase 4a (First Jewish Revolt)
Only one wing survived, and tang is bent and broken due to impact. The head belongs to Type C.
Dimensions: Overall L.: $31 \mathrm{~mm}+$; L. of head: 29 mm ; L. of tang: $4 \mathrm{~mm}+$; W.: 11 mm .
33. Trilobate iron arrowhead
L.A2651-5380 (Pl. 12.II: 15)

Phase 4b (period between the two revolts)
The tang is slightly bent due to impact. Two wing tips are also bent. The head belongs to Type C.
Dimensions: Overall L.: 52 mm ; L. of tang: 25 mm ; W. of head 11 mm .
34. Trilobate iron arrowhead
L.A2828-6361 (Pl. 12.II: 16)

Phase 4b (period between the two revolts)
Partly damaged head. The tang is broken, seemingly due to impact. The head belongs to Type B.
Dimensions: Overall L.: $47 \mathrm{~mm}+$; L. of head: 39 mm; W.: 14-15 mm.
35. Trilobate iron arrowhead
L.A2762-6151 (Pl. 12.II: 17)

Phase 4b (period between the two revolts)
Small damaged head. One wing is damaged and most of the tang is missing. It appears to belong to Type E.
Dimensions: Overall L.: $32 \mathrm{~mm}+$; L. of head: 25 mm ; W.: 8 mm .
36. Trilobate iron arrowhead
L.A12174-10583 (Pl. 12.II: 18)

Stages 2 to 3 (erection of the theater up to the creation of the artificial mount; area of the theater)

Very small and robust head that belongs to Type C. Its tip is missing.
Dimensions: Overall L.: $34 \mathrm{~mm}+$; L. of tang: 26 mm; W.: 11 mm .
37. Trilobate iron arrowhead
L.A2827-6344 (Pl. 12.II: 19)

Stages 2 to 3 (erection of the theater up to the creation of the artificial mount; area of the theater)
Small and robust head that belongs to Type C. Both its tip and tang are missing due to impact.
Dimensions: Overall L.: $31 \mathrm{~mm}+$; L. of head: 20 $\mathrm{mm}+$; W.: 12 mm .
38. Trilobate iron arrowhead
L.A12264-10745 (Pl. 12.II: 20)

Stages 2 to 3 (erection of the theater up to the creation of the artificial mount; area of the theater)
Tang is missing. The head belongs to Type D.
Dimensions: Overall L.: $28 \mathrm{~mm}+$; L. of head: 28 mm ; W.: 11-12 mm.
39. Trilobate iron arrowhead
L.A12616-12530 (Pl. 12.II: 21)

Stages 2 to 3 (erection of the theater up to the creation of the artificial mount; area of the theater)
Strongly barbed wings. The tang is bent due to impact. The head belongs to Type D.
Dimensions: Overall L.: $40 \mathrm{~mm}+$; L. of head: 28 mm ; L. of tang: 15 mm ; W.: 12-14 mm.

## STONE PROJECTILES

## Slingshots and ballista balls

The excavations of the top soil and the uppermost layers that covered the mausoleum area (Stages 4-5) yielded nearly $350(!)$ stone projectiles, most notably slingshots (see Plan 12.1, Table 12.1, and Ills. 12.3-5). Ten ballista balls were found among the mausoleum's ruins, in a context dating to the First Jewish Revolt, whereas all the others came from a Bar-Kokhba context: A cluster of ballista balls was uncovered directly above and next to the built remains in the area of the foray openings of the tunnels that were revealed to the southeast of the

PI. 12.III. Stone projectiles from the mausoleum excavations at Herodium.

III. 12.3. Compiled assemblage of slingshots found among the mausoleum's ruins.

III. 12.4. Perforated slingshot revealed during the excavations in the area around the mausoleum.

III. 12.5. Compiled group of slingshots and ballista balls found among the mausoleum's ruins.
mausoleum's podium; some of them in a direct relationship to the activities that took place inside the tunnels. The major group of ballista balls was revealed to the west of the tomb precinct, at the top of a layer including stone steps originating from the late stairway, which had been pushed down the stairway during the Bar-Kokhba Revolt (Stage 5). Such clusters, the result of incoming Roman fire, are attested at Masada and at Gamala (Stiebel 2005: 100, 103-104; 2007: Figs. 26, 28, 30-31). This find indicates the presence of auxiliary slingers, in all likelihood of Syrian origin, in the Roman force that attacked Herodium (cf. BJ 3.211; Stiebel 2007: 213-214).

## Rolling stones

Rolling stones were used at Herodium as early as the time of Herod the Great, and predominantly during the two revolts (Stiebel 2003: 219-221, 239-240). One such stone was revealed on the hill's eastern slope, below the artificial mount's fill (Ill. 12.6).
Twenty rolling stones were found heaped together just to the west of the late (monumental) stairway (W1706; Ill. 12.7). They were uncovered in a triangular pocket created by W1706 and the curvilinear bedrock scarp (rc.1778). Although it is difficult to ascertain this, it does seem that they were

III. 12.6. Rolling stone revealed on the hill's eastern slope, below the artificial mount's fill.
intentionally heaped here rather than incidentally having ended up here after being rolled down from the mountaintop. Such a concentration might have been intended to block a possible Roman assault via the stairway. A previous study pointed out two possible Roman assault axes from the southeast and the

Plan 12.1. Plan of the tomb precinct showing the locations where slingshots were revealed.

III. 12.7. Group of rolling stones as found in situ in the triangular pocket created by the late stairway and the curvilinear bedrock scarp (rc.1778).
northwest (Stiebel 2003: Fig. 6), as indicated by the concentrations of rolling stones that were documented at the very foot of the Mountain Palace-Fortress. The higher location of the concentration under discussion and the position of the stones heaped on the slope seem to suggest that they were indeed piled there by the rebels and were never put to use, as the Romans did not ascend via the stairway. The fact that the opening of the foray tunnel near the mausoleum was targeted by numerous slingshots and arrowheads seems to support this interpretation.

## DISCUSSION

An overall review of the military equipment that was uncovered in this area is in good accord with the data that has been documented to date from Herodium. A most important contribution of this assemblage derives from the sealed Herodian contexts in which military equipment has been discovered. Together with the assemblages from Jericho and Cypros (Stiebel 2013), it provides a unique and most important insight into the equipment of Herod's army. The bone ear-lath typical of composite bows, which had an eastern origin, is the earliest example of this type
of bow in Roman Palestine. This should not come as a surprise in view of Herod's recruitment of Babylonian mounted archers ( $A J 17.24 \mathrm{ff}$.; Shatzman 1991: 174-180; Stiebel 2007: 216-217).

When one turns to the period of the First Jewish Revolt against Rome, the dominance of light projectiles in the archaeological record seems to provide the best reflection of the fighting strategy of the attacking Romans. It seems that the steep terrain compelled the Roman forces to employ a combination of face-to-face combat and supporting fire. The latter was provided by the use of slings and light torsion artillery, such as ballistae. As noted above, we have suggested that the course of the Roman attack may be identified by an analysis of the spatial distribution of the rolling stones (Stiebel 2003: 220-221). Two such concentrations were identified southeast and northwest of the Mountain Palace-Fortress, to which one can add the stones that were heaped near the stairway. For the assaulting Romans the mausoleum's area presented two major strategic targets the late stairway and more crucially the foray openings of tunnels. The spatial distribution of the stone projectiles radiating from the opening of the tunnel close to the ruins of the mausoleum represents suppressing Roman fire - seemingly shot from the nearby hill to the east of this area.
